Everest[®] Media Compatibility

To achieve the best results from your Everest printer the following two points must be carefully adhered to:

- **Use ONLY media that is Everest compatible.**

Everest was developed in close collaboration with the media partners listed in the Everest Compatible Media Table, attached to this document.

Other Everest compatible media will quickly become available. For the most current and up-to-date media compatibility consult our website at www.rimage.com/everest

- **Maintain a clean environment free from excessive debris.**

The Everest is designed to deliver a very high quality print, and therefore requires an environment free from excessive debris. The printer itself has features to ensure a clean environment *within the printer*, but it is equally important that the media surface be uncontaminated before it goes into the printer.

Please make sure your media supply and the environment in which you use the system are free of airborne debris.
